Middle East Order Received

SRT is pleased to announce that it has received an order and initial payment for 500 of its Identifier vessel tracking transceivers.

The order will be delivered from existing stock during the first half of the current financial year. The order is from an existing customer with whom SRT has been working on various projects in the region for some time. The ultimate customer is a government who is seeking to improve their maritime safety and security and is the start of a significant rollout of vessel tracking projects in the region.

Simon Tucker said; "We have been working with our customer for a while on a number of separate projects in the Middle East. Whilst very small, this order is very material in that it signifies the start of the rollout in the region which will see many thousands of vessels having to fit tracking transceivers. I expect to see further orders of varying size over the next two years as the various projects gain momentum. Yet another new market has opened for AIS and the benefit of SRT."
