New Coast Guard System Operational

SRT Marine Systems plc ('SRT'), a global provider of maritime domain awareness systems and technologies for surveillance, security, safety and environmental protection is pleased to advise that a new vessel monitoring and inspection co-ordinating system contracted and announced in November 2022, is now operational.

This small system was contracted to SRT in November 2022, with an expected end to end delivery period of 6 months. The initial deployment phase was completed in January 2023, with operationalisation of the system undertaken in the subsequent months.

The system is owned and operated by a single national coast guard but serves multiple national agencies. The system uses a basic tactical version of the SRT-MDA system to deliver a single platform that integrates basic vessel tracking and identification information across multiple national agencies along with vessel inspection co-ordination functionality.

Simon Tucker, CEO of SRT Marine Systems, commented:

"The modular flexibility of the SRT-MDA System enables us to accommodate both tactical and strategic needs of customers to suit their present-day operational and budget requirements, whilst also delivering a future proof platform which can expand over time. This Coast Guard has taken its first steps with SRT on its strategy to build its own independent maritime surveillance and intelligence capabilities in order to deliver significant increases in operational effectiveness and efficiency."
