SRT receives AIS Coast Station order from Trinity House

SRT, the global provider of maritime tracking technologies, products and turn-key system solutions, is pleased to announce that it has received an order for AIS Coast Stations from Trinity House in the UK for deployment as part of the UK's growing AIS network monitoring and management capabilities.

Simon Tucker, SRT CEO said: "Our AIS Coast Station provides exceptional performance and functionality. As a British maritime technology company we are delighted to supply Trinity House with world beating technology that will enhance maritime safety and security in their jurisdiction."

About SRT:

SRT develops, manufactures and supplies maritime tracking technology and turn-key system solutions to marine stakeholders across the globe. The Company's products and solutions are used by individual vessel owners, port authorities, maritime infrastructure owners, coast guards and national security agencies to enhance their maritime domain awareness. Applications include the tracking of commercial and leisure vessels; sustainable fishery; anti-collision; search and rescue; waterway management, port and coast security; pollution management; and environmental management.

In the early 2006, SRT was the first company to develop a low cost technology platform supporting the International Maritime Organisation (IMO) adopted data communications technology, AIS (Automatic Identification System). This technology transmits vessel type, current co-ordinates, course and speed, and the vessel's unique identifier, in real time – air traffic control for boats. As a result of a global IMO sponsored mandate for the use of AIS, today AIS is being adopted and implemented worldwide in marine market as the next generation of radar. SRT's systems are entirely developed in the UK with 95% of revenues derived from exports.

With circa 26 million vessels operational globally and a growing demand from national authorities enforcing vessels operating in their waters to fit AIS as standard, SRT, the leading global provider of

AIS technology, is at the forefront of a rapidly developing and evolving multi-billion dollar maritime market.
